SPECIFICATIONS

GENERAL DESCRIPTION, TQ-1000, 1200 and 1300 Series: High strength, fire resistant fiberglass (fire retardant grade ASTM-E-84 Class 1, UBC Class 2 and Torch Test 1) combines the best properties of glass fibers laminated with premium grade polyresin in a continuous molding process to produce a rugged, heavy duty truck. Seamless construction allows the unit's body to be impervious to steam, acid, bleaches and other chemicals. Seamless interior means easy cleaning; use any sanitizer that you may choose; may use cart washer. High industry acceptance, because the T.Q.-FIBERGLASS CARTS are not sensitive to heat, will not melt, distort or deteriorate (like Thermoplastic Polys) when exposed to 200°F+ heat. the T.Q.-FIBERGLASS CARTS are ideal for climates of extreme temperatures.

Series 1000 Models: General purpose, open top, rounded inside corners, rolled edges. Continuous molded fiberglass construction, minimum thickness .18", bottom and caster mounting to be 1.00" min. with encased plywood. See price list for caster sizes. Medium durometer treads (65-80) shore are standard.

Series 1200 & 1300 Models: Upright type with cut-out on one side. Excellent for transporting clean or dirty linen, or soiled waste. Same construction as Series 1000 Model. See front of brochure & price list for wheel/ caster size and options.

Spring Platform: Molded one-piece fiberglass and lift load to convenient working height. Conical springs assemble to underside. Lift platform and spring assembly may be lifted from truck for cleaning. Springs can be adjusted to weight load, for maximum performance.

Top Covers: Molded fiberglass with continuous hinge at center. Half door folds back to provide opening to truck. Locking device available.

Flexible Vinyl Covers: Manufactured out of 16 oz. or 8 oz. woven nylon, impregnated on both sides with heavy vinyl coating (fire retardant). Variety of colors. Stenciling available.

NEW TQ Guard: Antimicrobial agent added to the resin during cart's construction. TQ guard will prevent growth of all types of bacteria, mold and mildew on the cart's interior surfaces and doors. (Same agent as used in surgical gowns and domestic kitchen cutting boards). TQ Guard creates very easy to clean surfaces and will prolong the cart's overall life.
